The following is an examiner's statement of reasons for allowance:

Art Unit: 2882

None of the prior art teaches or suggests a focal surface for an opto-electronic imaging system having a detector carrier configured to hold at least one detector, a flexible carrier substrate, at least one flexible thinned solid state element and a temperature control system configured to maintain the least one detector within a predetermined temperature range, wherein the detector carrier including at least one channel or being coupled to at least ^{one} ~~an~~ peltier element as claimed in independent claims 8 and 39.

None of the prior art teaches or suggests a flexible detector for imaging recording having a flexible carrier substrate and a thinned, flexible solid state element which is connected to the flexible carrier substrate, wherein the solid state element has at least one of a thickness of approximately 10 μ m to 20 μ m and a length-to-ratio of approximately 20 to 60 as claimed in independent claims 23 and 40.
